Regentech provides One-Stop Recycling Solution

Certificate of Disposal and EPA Indemnification

Regentech provides total service from removing installed systems and equipments in your offices, collection, and transportation to our warehouse fully licensed from the government authorities. Regentech issues certificate of disposal and indemnification for you. Our tracking system keeps all data and documents the disposition of material received at our facility. This frees your company from any future liability.

- EPA # NJD048351043

Security and Data Destruction

All company information, including asset tags, are removed. Any equipment with a hard disk drive is put through thorough processing resulting in the removal of company information by formatting and degaussing operation for disk sanitization.

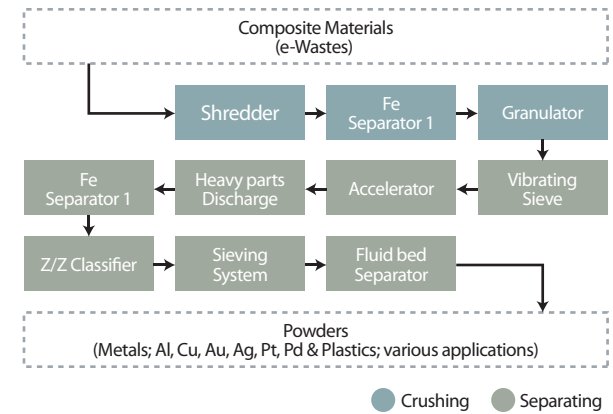

Asset Recovery

The most beneficial form of "recycling" for unused or unneeded equipment is to resell the equipment for its intended purpose. Regentech provides services for inventory works and remarket the excessive electronics throughout our worldwide networks and also offers the best opportunity aiming for the highest revenue return.

Materials Recovery

ISO certified state-of-art facilities in South Korea is a technology leader in this field employing top-notch and patented

processing technology. This plant covers all areas of recycling from remanufacturing to composite materials separation and produces pure metals unlike other recycling companies doing simple mechanical destruction. We recover all valuable materials such as copper, aluminum, gold, silver, palladium and other exotic metals contained.

Facilities

Modern facilities are capable of handling well over 440,000 pounds of material as well as processing.
